

ONE-SIGNAL XPRESS PERFORMANCE

Returns: 25.7% vs. 9.4% for the S&P 500 since 2015

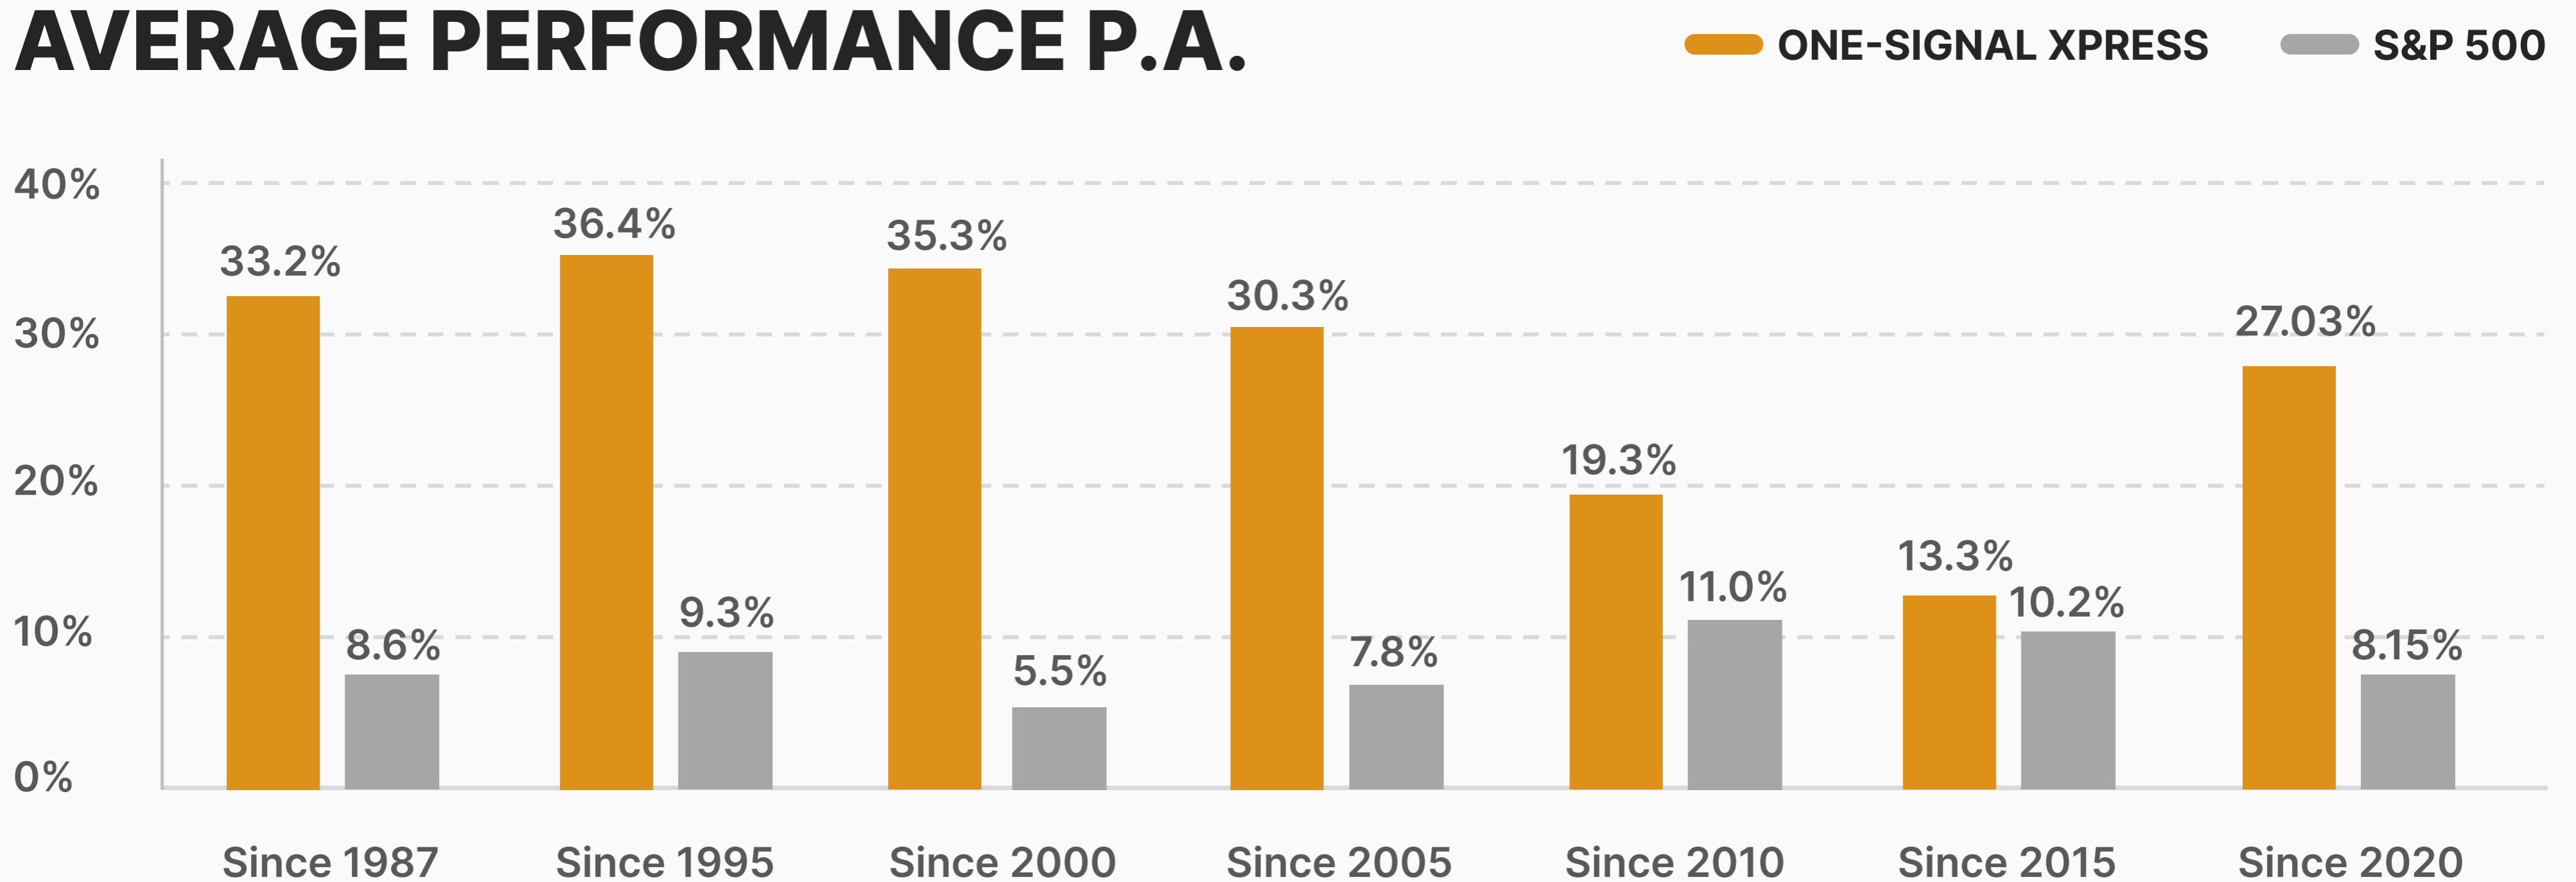

STRATEGY

ONE-SIGNAL Xpress provides a trading signal for the next trading day moments after the closing bell of the New York Stock Exchange. This ensures Xpress subscribers can leave their positions overnight if the signal remains unchanged. This is geared for investors seeking convenience and lower transaction costs.

PERFORMANCE SINCE 1987

AVERAGE PERFORMANCE P.A.

2005 - 2022

XPRESS

S&P 500

Average performance p.a	31.73%	7.60%
Variance	0.011%	0.016%
Alpha (α)	0.273	1
Beta (β)	38.92%	16.77%
Volatility	16.87%	19.81%
Risk-free rate	1%	1%
Sharpe Ratio	1.748	0.275
Treynor Index	0.757	0.33

COMMENTARY

Driven by high inflation, fear of recession, rising interest rates and geo-political turmoil, 2022 represented the greatest losses for since the Great Financial Crisis of 2008. All major indices closed the year in the red, such as the S&P 500 with -19.6%, the Nasdaq -33.1% and the Dow Jones -8.78%. While Hedge Funds had one of the worst years since 2007, ONE-SIGNAL performed strongly.

HISTORICAL PERFORMANCE & VOLATILITY

What influences ONE-SIGNAL's performance, except for 25 years of extensive research?

ONE-SIGNAL benefits from higher market volatility. The latter implies falling prices of securities, which our system anticipates and therefore delivers SHORT signals. Long/short investors can choose to follow these, or if they prefer long-only positions, they hedge their portfolios. Additionally, profits are reinvested, creating a compound interest effect. Our secret lies in identifying and capitalising on different sentiment cycles.

ONE-SIGNAL's performance is presented in accumulation, i.e. profits are not withdrawn, but reinvested. Losses are not covered externally, like the S&P 500. The system's performance arises without leverage and cost structures and taxes are not taken into account, as these vary from investor to investor.
